

Keywords: Spring 2 - Climate Change

Topic Title:

To analyse the nature of Climate and its change from scientific and religious points of view to see how the different faith traditions understand this ethical situation. We will also explore to what extent Governments can enforce legislation upon the public surrounding climate change.

Keyword	Definition
Climate Change	The belief that the world is heating up.
Anthropogenic climate change	Man-made climate change - climate change caused by human activity as opposed to natural processes.
Carbon dioxide (CO₂)	A gas in the Earth's atmosphere. It occurs naturally and is also a by-product of human activities such as burning fossil fuels. It is the principal greenhouse gas produced by human activity.
Carbon footprint	The amount of carbon dioxide released into the atmosphere by you individually or by a community.
Renewable energy	Renewable energy is energy created from sources that can be replenished in a short period of time. The five renewable sources used most often are: biomass (such as wood and biogas), the movement of water, geothermal (heat from within the earth), wind, and solar.
UNFCCC	The United Nations Framework Convention on Climate Change is one of a series of international agreements on global environmental issues
Government Overreach	The Government being overly involved in the life of its citizens

Personal Liberty	That human beings should be free to do as they please.
